

TokTickIT Lab 2

Final Submission Evidence

Student: Chartanat Upthaipiboon | Student ID: 67070507210

Repository: [Chxtamos/-TokTickIT-](#)

Final main commit: 7780ce098f5e8ae690dfa30e0e962dccc6ba9033

This PDF follows the Lab 2 labsheet exactly: one concise file, working links, readable screenshot evidence, and headings
Answer Part 1 through Answer Part 9 in the required order.

Answer Part 1: Git Use with Engineering Workflow

Lab 2 used the required staged workflow: completed Lab 1 main -> lab2-staging -> one feature branch per Issue -> peer-reviewed Pull Request -> lab2-staging -> one release Pull Request -> main.

Repository: [GitHub repository](#)

Final release: [PR #50 - Release: TokTickIT Lab 2](#)

Peer-review record: [reviewer.md](#)

Project board: [TokTickIT Individual Sprints](#)

Final feature PRs #13, #15, #17, #19, #21, #23, #25, #27, #29, #31, #33, #35, #37, and #44-#49 target lab2-staging. All Issues are closed after review; PR #50 merged lab2-staging into main.

Repository structure and ignored-file evidence:

toktickit/ client/src, client/tests/lab-01, client/tests/lab-02, client/e2e/lab-02 server/src, server/tests/lab-01, server/tests/lab-02, server/prisma docs/lab-02, artifacts/lab-02/screenshots, output/pdf

The repository .gitignore excludes node_modules, .env files, build/dist output, Playwright reports/results, and e2e temporary uploads. README and .gitignore are rendered and linked in the final repository: [README.md](#) | [.gitignore](#)

Answer Part 2: Spec-Driven Development

The Engineering Contract was completed before implementation and kept as the source of truth. It contains numbered Functional Requirements, Business Rules, UI rules, data decisions, API contract, Acceptance Criteria, and Definition of Done.

Rendered contract: <docs/lab-02/specification.md>

The contract covers the temporary Development Requester testing context, Ticket creation, My Tickets, Ticket Detail, Attachment lifecycle, ownership, validation, failure states, responsive UI, accessibility, peer review, visual inspection, and final main verification.

Pre-implementation evidence: [contract PR #13](#) was completed and merged before the implementation PR sequence #15 onward.

Key approved decisions include server-generated unique Ticket Numbers, owner context through X-Requester-Id, safe 404 for non-owned resources, idempotent creation, five active Attachment limit, soft removal, and no Lab 3 authentication or IT Staff workflow.

Answer Part 3: Test-Driven Development and Traceability

The test plan maps every Acceptance Criterion to unit, API/integration, UI, responsive, visual, and E2E evidence. The final rendered test plan includes actual test-file paths, final status, commands, and the completed visual checklist.

Rendered test plan: <docs/lab-02/tests.md>

Final command output from main:

```
Server: 11 test files, 62 tests passed (RUN_DB_INTEGRATION=1)
Client: 9 test files, 54 tests passed
Playwright: 9 tests passed
Prisma migrate deploy: no pending migrations
Seed: two consecutive successful runs with idempotent data
```

Traceability: [Acceptance Criteria and test matrix](#)

Answer Part 4: AI Use with Reflection

LLM used: OpenAI Codex through ChatGPT (GPT 5.6 Sol, High). The AI helped with requirements analysis, repository inspection, contract drafting, test planning, implementation assistance, review diagnosis, evidence checks, and documentation consistency.

Rendered AI record: <docs/lab-02/ai-use.md>

The document contains 7 selected prompts actually used, descriptions of how results were used, mistakes that were rejected, Human approval points, and the student's own reflection.

My Reflection

Lab 2 used an AI agent for repetitive planning and implementation support. I learned to write more focused prompts, constrain each task to one Issue and branch, and reject work that was not explicitly authorized. I retained responsibility for approving requirements, reviewing code and tests, validating evidence, and making the final submission claims.

Answer Part 5: Development Requester Select Screen

This screen simulates the logged-in Requester context for Lab 2 testing only. It loads active Requesters, excludes inactive data, supports loading/failure recovery, and shows the current Requester after Continue.

Ready with active Requesters

Loading state

Safe failure and Retry

Answer Part 6: Working Ticket Screen - Create Mode

Create Ticket evidence covers the required initial, validation failure, submitting, success, API failure, and invalid Attachment states. The Requester is selected before entering the application; reference data is loaded from PostgreSQL; Ticket Number, saved values, and NEW status come from the backend.

The screenshot shows the 'Create Ticket' form in the TokTickIT application. The form is titled 'Create Ticket' and includes a 'Back to workspace' link. It contains several input fields: 'Ticket Number' (Generated after submission), 'Ticket Date' (Recorded after submission), 'Requester' (Anan Sritsak), 'Category' (Select Category), 'Related System' (Select Related System), and 'Requested Priority' (MEDIUM). There are also text areas for 'Summary' and 'Description', and a file upload section for 'Attachments'. The form is marked with asterisks (*) for required fields.

Initial form and loaded references

The screenshot shows the 'Create Ticket' form with field-level validation errors. The 'Category' dropdown is highlighted with a red border and a message 'Category is required.' The 'Related System' dropdown is also highlighted with a red border and a message 'Related System is required.' The 'Summary' text area has a red message 'Summary must contain 5 to 120 characters.' The 'Description' text area has a red message 'Description must contain 10 to 5,000 characters.'

Field-level validation

The screenshot shows the 'Create Ticket' form with the 'Submitting...' button. The 'Category' dropdown is set to 'Account and Access', 'Related System' is 'Campus Wi-Fi', and 'Requested Priority' is 'HIGH'. The 'Summary' text area contains 'Feature 22 API failure 1788621199622'. The 'Description' text area contains 'Visual evidence for the Lab 2 requester workflow.' The 'Attachments' section shows a file upload button and a message 'invalid.txt (1 KB) — Unsupported file type. Remove'.

Submitting and disabled controls

The screenshot shows the 'Ticket created' success message. It displays the 'Official Ticket Number: TKT-2026-000336'. Below this, there is an 'Attachment results' section with a message 'invalid.txt: Unsupported file type.' At the bottom, there are two buttons: 'Back to workspace' and 'Create another Ticket'.

Backend-generated success

Answer Part 7: Working My Tickets Screen

Requester A sees only A-owned Tickets. Switching to Requester B removes A data and loads B data. The evidence covers search, filters, sorting, pagination, empty state, no-results state, failure recovery, and cross-requester rejection.

Requester A list

Requester B list

Search/filter/sort/page

Owner empty state

No-results state

Safe failure state

My Tickets contract: [api-spec.md](#) list behavior | Issue #39

Answer Part 8: Working Ticket Screen - View Mode and Attachments

Owned Ticket Detail is read-only and shows Ticket information plus Attachment metadata. Evidence covers adding an Attachment, active download, individual retry, soft removal with a valid reason, retained removed metadata, blocked removed download, and unauthorized access rejection.

Owned Detail with Download/Remove

Pending upload state

Accessible removal dialog

Removed metadata and blocked actions

Unauthorized safe not-found result

Attachment and ownership contract: [api-spec.md](#) [Attachment endpoints](#) | [Issue #40](#)

Answer Part 9: Zen Green UI and Responsive Evidence

The UI follows the approved Zen Green palette, readable text badges, editable/read-only distinctions, validation placement, button hierarchy, and responsive rules. The visual checklist was completed against ui-spec.md.

Rendered UI specification: <docs/lab-02/ui-spec.md>

The desktop version of the 'Create Ticket' form is wide and organized into sections. It includes a 'Ticket Number' field with a generated value, a 'Ticket Date' field, and a 'Requester' field. Below these are dropdown menus for 'Category', 'Related System', and 'Requested Priority'. A 'Summary' field is followed by a large 'Description' text area. At the bottom, there is an 'Attachments' section with a 'Choose Files' button and a note about file types and sizes. The form is styled with a clean, modern layout using the Zen Green palette.

Create Ticket - Desktop

The tablet version of the 'Create Ticket' form is narrower than the desktop version. It maintains the same layout but with adjusted spacing and font sizes for better readability on a smaller screen. The 'Ticket Number' and 'Ticket Date' fields are now side-by-side. The 'Category', 'Related System', and 'Requested Priority' dropdowns are also side-by-side. The 'Summary' and 'Description' fields are stacked vertically. The 'Attachments' section is at the bottom with a 'Choose Files' button and a note about file types and sizes.

Create Ticket - Tablet

The mobile version of the 'Create Ticket' form is the narrowest of the three. It uses a single-column layout to fit the screen. The 'Ticket Number' and 'Ticket Date' fields are stacked vertically. The 'Requester' field is also stacked. The 'Category', 'Related System', and 'Requested Priority' dropdowns are stacked. The 'Summary' and 'Description' fields are stacked. The 'Attachments' section is at the bottom with a 'Choose Files' button and a note about file types and sizes.

Create Ticket - Mobile

The desktop version of the 'My Tickets' view shows a list of tickets. The table has columns for 'Ticket Number', 'Summary', 'Category', 'Related System', 'Requested Priority', 'Current Status', and 'Last Updated'. The first ticket is 'TKT-2026-000338' with a summary of 'Feature 22 visual evidence 1788621204285-f34f331e'. The table is styled with a clean, modern layout using the Zen Green palette.

My Tickets - Desktop

The tablet version of the 'My Tickets' view shows a list of tickets. The table has columns for 'Ticket Number', 'Summary', 'Category', 'Related System', 'Requested Priority', 'Current Status', and 'Last Updated'. The first ticket is 'TKT-2026-000338' with a summary of 'Feature 22 visual evidence 1788621204285-f34f331e'. The table is styled with a clean, modern layout using the Zen Green palette.

My Tickets - Tablet

The mobile version of the 'My Tickets' view shows a list of tickets in a card format. Each card displays the 'Ticket Number', 'Summary', 'Category', 'Related System', 'Requested Priority', 'Current Status', and 'Last Updated'. The first ticket is 'TKT-2026-000338' with a summary of 'Feature 22 visual evidence 1788621204285-f34f331e'. The cards are styled with a clean, modern layout using the Zen Green palette.
