

TokTickIT Lab 2

Final Delivery and Evidence Summary

Student: Chartanat Upthaipiboon (67070507210)

GitHub: Chxtamos/-TokTickIT-

Final main commit: 7780ce098f5e8ae690dfa30e0e962dccc6ba9033

This concise report follows the required Answer Part 1 through Answer Part 9 order. Links point to the final repository, engineering documents, evidence, and release PR.

Answer Part 1: Repository and Lab 2 Goal

TokTickIT is a requester-facing IT service desk MVP. Lab 2 extends the Lab 1 React, Express, Prisma, and PostgreSQL foundation with a complete temporary Development Requester workflow.

Repository: GitHub repository

The selected Requester context is a Lab 2 testing mechanism, not authentication. Real authentication and IT Staff workflows are explicitly deferred to later work.

Answer Part 2: Git Engineering Workflow

The work used the required staging flow: completed Lab 1 main -> lab2-staging -> feature branch -> peer-reviewed PR -> lab2-staging -> release PR -> main.

- Engineering Contract and Test Plan: Issue #11, PR #13.
- Implementation and evidence Issues: #14, #16, #18, #20, #22, #24, #26, #28, #30, #32, #34, #36, #38, #39, #40, #41, #42, and #43.
- Final release: PR #50, lab2-staging -> main, merged successfully.

Release PR: #50 Release: TokTickIT Lab 2

Answer Part 3: Engineering Contract

The approved contract defines requester selection, Ticket creation, owner-scoped My Tickets and Ticket Detail, validated Attachment lifecycle, Zen Green UI, accessibility, responsive behavior, tests, visual evidence, and final release rules.

Documents: specification.md, api-spec.md, ui-spec.md, tests.md

Answer Part 4: Product Implementation

The final product supports:

- Active Development Requester selection with restore, validation, loading, empty, and failure states.
- Idempotent Ticket creation with server Ticket Number sequence, validation, ownership, and safe errors.
- My Tickets search, AND filters, sorting, page sizes, pagination, empty/no-results states, and owner isolation.
- Read-only Ticket Detail with active and removed Attachment metadata.
- Attachment upload, MIME/signature/size checks, retry, download, soft removal, retained metadata, and unauthorized protection.
- Zen Green styling, keyboard semantics, responsive table/cards, focus management, and reduced-motion support.

Answer Part 5: Test Results

Suite	Result
Server build	PASS

Server tests with PostgreSQL integration	11 files / 62 tests passed
Prisma migration deploy	PASS - no pending migrations
Seed twice	PASS - idempotent
Client build	PASS
Client tests	9 files / 54 tests passed
Playwright E2E	9 tests passed

Full command evidence and traceability: tests.md

Answer Part 6: E2E and Visual Evidence

E2E-01 through E2E-05 pass. Evidence includes requester-to-Ticket creation, A/B ownership isolation, Attachment lifecycle, responsive viewports, and visual state capture.

There are 29 screenshots in artifacts/lab-02/screenshots/. They cover requester selection, Create Ticket, My Tickets, Ticket Detail, Desktop, Tablet, and Mobile states.

Answer Part 7: Peer Review and Corrections

Peer reviewer: Tanboon Teawsawat (67070507211). Review feedback was addressed through the linked Pull Request conversations. Corrections included branch targeting, Issue linkage, validation edge cases, active Requester checks, real database evidence, individual Attachment retry, query preservation, responsive checks, mobile card equivalence, visual evidence, and final release flow.

Review record: docs/lab-02/reviewer.md

Answer Part 8: AI Use and Human Responsibility

Codex was used for requirements analysis, repository inspection, test planning, implementation assistance, evidence review, and consistency checks. The student reviewed and approved the engineering contract, decisions, peer-review evidence, corrections, and final submission claims.

AI record and reflection: docs/lab-02/ai-use.md

The reflection states how the student used focused prompts, rejected unsanctioned work, and retained Human responsibility for approval and submission.

Answer Part 9: Final Delivery Checklist

- Release PR #50 merged lab2-staging into main.
- Final main commit is 7780ce098f5e8ae690dfa30e0e962dccc6ba9033.
- All documented Server, Client, migration, seed, and E2E commands passed.
- All required E2E evidence and visual screenshots are stored and linked.
- README, specification, tests, reviewer record, and AI reflection are current.
- No secrets, .env files, generated build output, or uploaded files are tracked.
