

# TokTickIT Lab 3 Final Submission Evidence

Final main: d152bc10dafa146e59304d9d09343f81295429ad | Final release PR #87

Final released main revision used as the product baseline: d152bc10dafa146e59304d9d09343f81295429ad.

Final evidence PR: #86 (docs/38-lab3-final-submission); final release PR: #87 (lab3-staging -> main).

## Answer Part 1: Git Use with Engineering Workflow

Lab 3 used feature branches and peer-reviewed PRs into lab3-staging. PR #84 released the implementation baseline to main as 55d80fe; PR #86 then added the reviewed final evidence/responsive corrections to lab3-staging, and PR #87 promoted that reviewed staging state to main as d152bc1 on 2026-10-03. PR #87 was approved by Peepipat-Suesoongnuen before merge. The implementation/review history is rendered from docs/lab-03/reviewer.md. Issue #65 remains open only for final documentation synchronization and the explicitly required human visual/accessibility sign-off.

## Answer Part 2: Spec DD

The Sprint 3 contract is in docs/lab-03/specification.md, ui-spec.md, and api-spec.md. It defines the Sprint Goal, scope/exclusions, numbered FRs and BRs, the Requester/IT Staff/Administrator authorization matrix, authenticated ownership, migration from Development Requester identity, password/session decisions, Ticket workflow, Public Comments versus Internal Notes, Administrator safety rules, AC-01 through AC-32, and Product Definition of Done. The contract was created and reviewed before the main implementation sequence; PR #68 is the contract review record.

## Answer Part 3: Test DD and Traceability

docs/lab-03/tests.md is the source-of-truth test plan and AC-to-test index. Exact final main d152bc1 evidence: Client CI #142 / run 37131535259 passed; Server CI #155 / run 37131535224 passed; E2E CI #124 / run 37131535237 passed. These exact-final-main runs execute the released tree that includes the PR #86 evidence/responsive corrections. The earlier PR #86 evidence suite passed 25/25 Playwright tests including the final responsive capture cases.

## Answer Part 4: AI Use with Reflection

docs/lab-03/ai-use.md records the AI workflow and ten selected real prompts. Earlier implementation used the Codex desktop coding agent where the exact model identifier was not exposed; the final evidence pass also used ChatGPT GPT-5.6 Sol. The student's original My Reflection remains in that file unchanged in substance. It explains that AI was useful for reading the lab sheet, organizing requirements/specification/API/UI/test planning, while Human-in-the-loop and peer review were necessary because early requirements and generated interpretations needed verification and correction against the Lab 3 handout.

## Answer Part 5: Working Login and Password Change UI

Authentication evidence covers valid/invalid credentials, inactive accounts, mandatory initial-password change, authenticated user/role display, logout and post-logout denial. API tests also cover restricted-session and normal-session expiry boundaries, CSRF/session rotation and safe failures. The screenshot set includes the Login screen at desktop, tablet, mobile and zoom-equivalent layouts. E2E-01 is covered by client/e2e/lab-03/authentication.spec.ts.

## Answer Part 6: Working IT Staff Ticket Queue UI

The Staff Queue supports realistic data, search, filters, sorting, pagination, ownership/status/priority presentation, open-detail navigation, no-results/failure states and responsive card/table layouts. The final evidence suite captures the queue at 1440, 768, 390 and 360 widths plus the 200%-zoom-equivalent layout. Queue E2E behavior is covered by `client/e2e/lab-03/staff-queue.spec.ts`.

## Answer Part 7: Working IT Staff Ticket Detail UI

Staff Ticket Detail demonstrates claim/reassign ownership, IT Priority, permitted status changes, Public Comments, private Internal Notes, Attachment continuity, validation/conflict handling and role restrictions. Direct authorization tests prove Requesters cannot retrieve Internal Notes and protected resources do not leak existence.

`client/e2e/lab-03/staff-ticket-flow.spec.ts` and server Lab 3 authorization/workflow suites provide automated evidence; final screenshots capture Operational Controls and the visibly distinct Internal Notes area.

## Answer Part 8: Working Administrator User Management UI

User Management provides Name/Email/Role/Status/Edit, search, role filter, create, edit, activation/deactivation and new initial-password behavior. Tests cover duplicate email/invalid input, one-role assignment, self-deactivation prevention, last-active-Administrator protection, session revocation and forbidden access for non-Administrators.

`client/e2e/lab-03/admin-user-management.spec.ts` provides E2E-04 evidence. The 360px audit exposed a real overflow defect in Administrator cards; PR #86 fixes it and the rerun passes.

## Answer Part 9: Zen Green UI and Responsive Evidence

`docs/lab-03/ui-spec.md` defines the Zen Green visual/accessibility contract. PR #86 adds deterministic evidence for 1440, 768, 390 and 360 CSS-pixel widths and a 200%-zoom-equivalent 720 CSS-pixel layout. It captures Login, Requester My Tickets, Staff Queue, Staff Ticket Detail and Administrator User Management and asserts no document-level horizontal overflow. The first audit exposed two real defects (Requester at 768 and Administrator cards at 360); both were corrected before the green evidence run. Screenshot contact sheets are included in the PDF and the original PNGs are stored under `artifacts/lab-03/screenshots/`.

Important completion note: automated evidence, exact-final-main CI, screenshots and peer review of PRs #86/#87 are complete. PR #86 reviewer Peepipat-Suesoongnuen explicitly opened the screenshot evidence and confirmed it was real and contained no secret leakage, but also confirmed that the formal human sign-off was still pending. The remaining manual gate is a student/peer visual/accessibility checklist covering design consistency, role navigation, badges, editable/read-only styling, validation placement, keyboard/focus behavior, clipping, overlap, horizontal overflow and absence of secret/Internal Note leakage. An AI/coding agent cannot truthfully substitute for that human sign-off.

# Final Verification Note

Exact-final-main CI on d152bc1 is green: Client run 37131535259 (#142), Server run 37131535224 (#155), and E2E run 37131535237 (#124). PR #86 and PR #87 are peer-reviewed and merged. The formal human visual/accessibility sign-off remains a separate manual gate and is not represented as completed by this AI-generated document.
